

# Thank you for your purchase!

Here's our step-by-step instruction to get started with your theme.

## Step 1 - Import the .json file in your Elementor Library

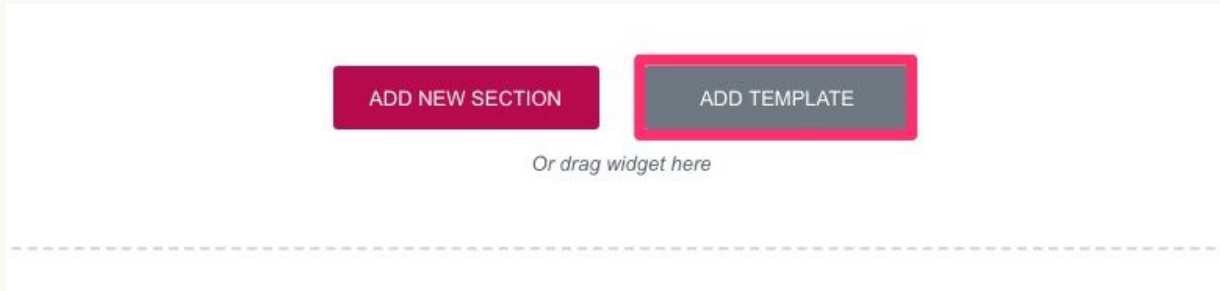

## Step 2 - Go to PAGES in the WordPress backend and Edit a Page (or add a new page) and go to "Edit in Elementor"

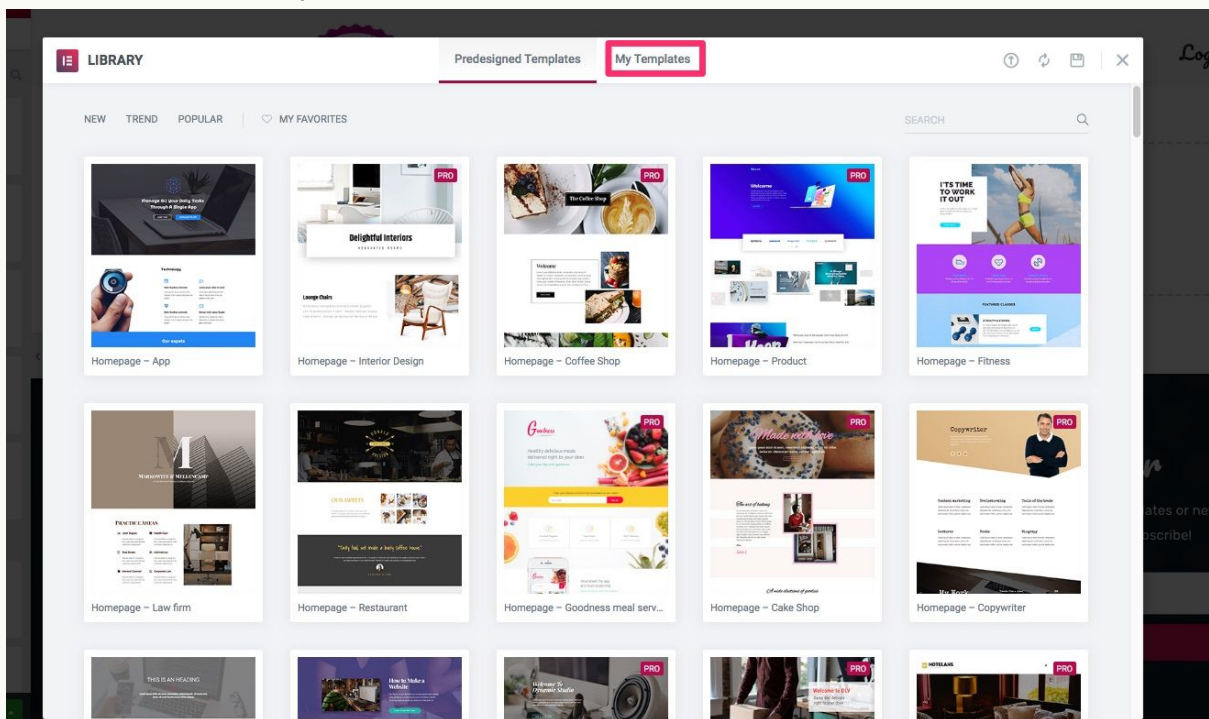

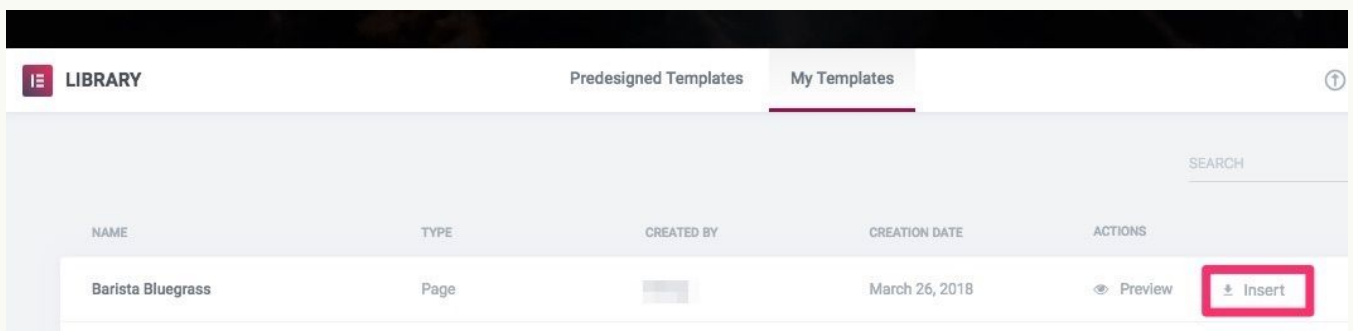

### Step 3 - Add your new Elementor Template

### Step 4 - Choose the My Templates tab

### Step 5 - Choose the uploaded theme and click on INSERT

**Step 6** - Set page template to Elementor Canvas. In Document Settings make sure you select the template: ELEMENTOR CANVAS (if Elementor doesn't take you automatically, you can reach this settings page by clicking on the small cog-wheel at the left bottom of your screen). This makes sure that your template is loaded without a header and/or footer from your existing template.
